

STRENGTH AND SAFETY WHERE YOU NEED IT

10" and 22" wrap models

Strong, durable and good looking, Aero bulkheads provide strength and security for your driver and your load. DOT-rated bulkheads come in 10" and 22" wrap models. The 22" wrap model is designed with holes in the top rail for Side Kit bow storage. Aero tests DOT rated bulkheads to FMCSA 393.114 standards with their destructive tests. Flat (no wrap) non-DOT rated models available.

Tested to meet federal DOT regulation

Easy installation

no stake pockets required across the trailer front

Also available in Flat (no wrap) non-DOT models

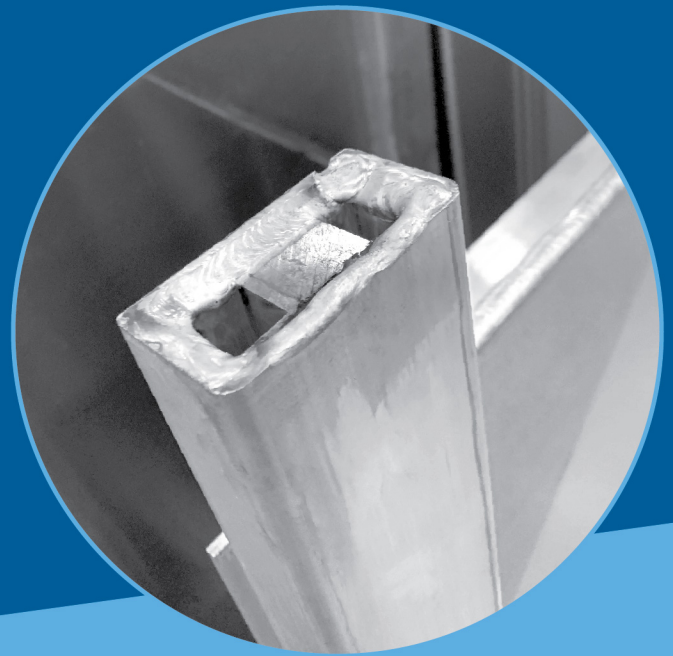

SOLID POST DESIGN

Aero's unique solid post design provides additional strength at the back of the bulkhead wrap. The corrugated front eliminates the need for posts and stake pockets across the front of the trailer. Our universal fit is easy to install.

This product meets D.O.T. standard #CFR 393.114 (c) (1) or (c) (2) for loads up to 50,000 pounds when installed in strict accordance with written instructions from Aero Industries.

STRENGTH AND SECURITY

FOR YOUR DRIVER

FUNCTION + APPEARANCE

Designed for both function and appearance, the bulkhead is constructed using aluminum sheet, extrusions and castings. Using our knowledge and expertise as the industry's leading tarp manufacturer, the bulkhead's top corners are shaped to eliminate wear points and maximize tarp life. All wrap models have built-in starter channels to accept side kit panels.

For years, Aero has been on the front-end of flatbed bulkhead manufacturing and continues to be a leader in the industry.
